A Word from the CEO

Dear Members & Residents

As we embrace the heart of winter in the Cape Winelands, I would like to take this opportunity to wish all our residents a happy and relaxing winter holiday season. For those who will be travelling during this time, please do so safely.

On the Estate, our dedicated maintenance team is hard at work on a number of important winter projects to ensure our beautiful environment and infrastructure remain in top condition. This includes the servicing and cleaning of stormwater drains, electrical substations, pump stations, irrigation reticulation systems, and the various HOA buildings. These efforts are part of our ongoing commitment to maintaining the high standards and functionality of our Estate.

I'm also pleased to share some exciting developments on the social side of Estate life. I recently had the pleasure of meeting with three enthusiastic residents who are proposing a calendar of social events and community initiatives aimed at fostering stronger connections among residents and encouraging outdoor family activities. Some of the wonderful ideas being explored include a fun run, garden day, family harvest day, and summer sunset picnics on the Estate. The HOA is fully supportive of this initiative and looks forward to working with the residents to bring these events to life.

Finally, I encourage you all to stay warm this winter and make the most of the excellent recreational facilities on the Estate, as well as the seasonal specials currently being offered by our valued commercial partners.

Warm Regards

Peet De Wet - CEO

A Word from the Chairman

Memorandum of Incorporation (MOI)

The Board has dedicated significant time to revising the MOI to align it with the Companies Act, modernise its provisions, and incorporate a Fundamental Matters Clause. This clause is intended to limit the Board's authority on material decisions, ensuring greater member input.

Two-member information sessions were held on 6 May and 21 May 2025, with details communicated to all members. We also circulated all member comments from 2024, along with feedback received ahead of the information sessions.

While the general comment period ended on 6 June 2025, it was extended to 30 June 2025 for certain commercial members to accommodate legal complexities and delays due to their legal advisors' availability. The Board has also sought legal guidance on certain matters.

A revised MOI, clearly showing changes from the initial draft, will be shared with members ahead of an additional information session. While feedback has been largely positive and supportive, it is not feasible to incorporate all comments. All comments, whether accepted or not, will however be reported to members.

A final proposed MOI will be tabled at a Special General Meeting, where a 75% member vote will be required for approval. Although we cannot commit to specific timelines, we are working diligently to conclude the process as soon as possible.

Board of Directors

Nico van der Westhuizen resigned from the Board on 7 May 2025 due to personal time constraints. We sincerely thank him for his dedicated service to the estate over the past three and a half years.

Although the MOI allows the board to operate with four directors, we decided to strengthen the board with the appointment of two additional members - Linda Smith and Basie van Dyk - effective 15 May 2025. We are excited about their contribution and sharing their experiences and opinions with us. As communicated previously, their appointments will remain in effect until the 2025 Annual General Meeting, at which point they may stand for re-election.

Blaauwklippen River Erosion: Rehabilitation Project Update

The storms of the last two years have had devastating consequences, and many outstanding repairs and rehabilitation efforts are still pending.

We have, however, as part of our environmental commitment, submitted a formal Environmental Impact Assessment (EIA) application on 2 April 2025 which was the final step in the approval process. The application allows for a decision-making period of 106 days by provincial and national departments, with approval expected by 18 July 2025.

A Word from the Chairman

Following a detailed evaluation process, the HOA and the Golf Club jointly appointed two experienced civil construction firms to undertake the rehabilitation work across eight designated sections of the river within the Estate. Both contractors have committed to the proposed timelines, with construction to commence within three weeks of EIA approval and is projected to take five months with minimal disruption to residents and golfers.

Kleine Zalze Wines: Cellar Upgrade

We are excited to share news of the highly anticipated upgrade to the Kleine Zalze wine cellar, which officially began last week.

Phase one of the project focuses on internal renovations. This includes the complete stripping and reassembly of the winery interior, with the installation of modern, state-of-the-art winemaking equipment. The current cellar facilities and technology have become outdated and no longer support the production standards required for Kleine Zalze's flagship wines. Once complete, the upgraded cellar will be dedicated solely to the production of Kleine Zalze's Premium range of wines, significantly reducing the level of bottling and industrial activity on-site.

Phase two of the upgrade is scheduled for 2026 and will include a new reception area, wine tasting facilities, new kitchen and a restaurant.

We look forward to seeing this exciting project unfold, further enhancing our Estate's reputation as a world-class destination.

Architectural Guidelines

The Board has approved amendments to the Architectural Guidelines following a request from Building Control. These changes correct primarily technical errors, clarify ambiguous wording, and address misunderstandings between the original intent and the interpretation of the guidelines.

We acknowledge the commitment made in 2024 not to amend the guidelines without prior member consultation and sincerely apologise for not following that process. However, suspending the amendments at this stage could cause greater confusion, particularly as some building plans may already rely on the updated version.

A detailed notice outlining the changes was distributed on 15 May 2025. Should you have any questions or require clarification, please do not hesitate to contact me directly.

Estate Security Workshop

Based on a recent workshop with the HOA and Thorburn Security Solutions regarding access control policies, and to review protocol for visitor access to commercial entities, the golf club and residents, the Board concluded that while current Estate security protocols are generally effective, there is room for improvement.

A Word from the Chairman

Several immediate enhancements have been implemented, including streamlining contractor and service provider registration. We are also exploring the use of RFID (Radio Frequency Identification) tags for residents to complement existing biometric systems, which may help reduce access delays.

Other proposals, such as simplified visitor access and updated courier protocols, are under review. All security strategies will continue to balance convenience with robust safety measures.

SMA Trust Wildlife Management Policy

The recent Caracal information session, hosted by the Special Management Area (SMA) Trust in collaboration with CapeNature, was well attended.

We extend our sincere thanks to the CapeNature experts and to Kathy Harris, Chairperson of the SMA Trust, for their valuable insights and informative presentations.

Following a recent incident involving a missing cat, likely due to caracal predation, CapeNature was informed and consulted. Their guidance remains unchanged: trapping or removing caracals is not supported due to ecological risks.

The HOA and SMA Trust remain committed to responsible wildlife management and will continue working closely with CapeNature to ensure a balanced approach between biodiversity and community safety.

Member Disputes

Over the past few months, regrettably, there have been a few incidents of personal disputes between members. The Board views these matters with concern, as they do not reflect the spirit of community and the high standards of lifestyle we aim to uphold.

The HOA is not mandated to mediate in such disputes and encourages all members to resolve disagreements amicably and with mutual respect. Living on De Zalze means being part of a close-knit community, where consideration and tolerance are essential. We urge all residents to contribute to a positive and respectful environment.

Kind Regards

André du Plessis - Chairman

General and Recycling Waste – Homeowners Association

The HOA sincerely thanks all residents for their efforts in managing our waste and encourages everyone to increase recycling habits – let's work together to bring our recycling rates closer to those of general waste!

Please note that the statistics below are for the period January to May 2025 and exclude the Estate Commercial Entities.

Recycling statistics for January - May 2025, excluding the Estate Commercial Entities. GRAPHIC: Supplied.

Just a reminder, to assist with further reducing our environmental impact, we have implemented specialized waste recycling methods and placed disposal boxes for the waste listed below at the HOA Offices for your convenience:

- All types of lightbulbs, including fluorescent bulbs
- All types of batteries

Why Recycling is Important:

- Protects Ecosystems and Wildlife
- Conserves Our Natural Resources
- Saves Energy

- Reduces the Need to Harvest New Materials
- Reduces Carbon Emissions
- Saves Money
- Bringing People Together
- Educating People About the Importance of Protecting the Environment
- Create Jobs
- Reduces Combustion / Air Pollution

By recycling our materials, we create a healthier planet for ourselves and future generations.

Stocking the Groote Zalze Dam with Grass Carp

Peet de Wet, CEO of the HOA and Mike Munro, MD of the Golf Club were present when Francois Claassen, the fish breeder, did the stocking of the 450 grass carp. PHOTOS: Jeandri Streicher.

The dam at the 12th and 13th holes on the golf course has experienced an overabundant growth of vegetation (floating and submersed plants) as well as the growth of algae in summer months.

This has become problematic aesthetically and has resulted in odour problems when water temperatures rise and bacterial decay of organic material is prominent. For this reason, it was necessary to intervene and to restore the health of the system which forms part of our beautiful signature golf hole, i.e. the par 4 on the 13th.

One of our members, Hanré Streicher, who has witnessed the success of grass carp being introduced to a similar situation in a nearby Stellenbosch dam, initiated and facilitated the project.

Aquatic experts were brought in to assess the dam after which a Dam Management Plan was drawn up by an aquatic scientist, Dr Kobus du Plessis.

Recommendations from this plan inter alia included the management of nutrient runoff from the fertilized fairways by adding vegetated buffer zones between the fairways and the dam, and the management of the submersed aquatic vegetation and algae with a combination of chemical control (short term action) and the introduction of 450 sterile grass carp fingerlings who feed off the aquatic plants and keep the overgrowth under control (long term action).

The project has been funded 50/50 by the HOA and the Golf Club. The project was performed from the outset under the watchful eye of the De Zalze SMA Trust who gave several inputs and eventually approved of the Dam Management Plan and its recommendations.

Licenses to stock the dam with grass carp were obtained from Cape Nature as well as the Department of Forestry, Fisheries and the Environment.

Regarding Calls from the Security Gates

The HOA frequently received inquiries from residents regarding calls made by gate officers to request voice clearance for access for visitors, deliveries, contractors, and service providers.

The concern raised is that for many of these calls, a Caller ID is not displayed to indicate that the call is coming from one of the De Zalze access gates, which results in residents rejecting the calls and therefore being unintentionally denied access. This leads to frustration for residents expecting guests or deliveries, etc. and creates congestion at the gates while officers attempt to gain permission for entry.

To avoid this problem in the future, please make sure you save the correct gate scanner number on your phone, and that the number does not somehow end up on your blocked numbers list.

The number from which you will be called is: 087 093 2447

Please also be aware that the ability to make calls to the scanners has been intentionally disabled, so please contact the **24-hour security number (071 443 1779)** for any security-related matters.

A concern has been raised that for many calls from the gate shows no caller ID, resulting in access to visitors, deliveries, contractors, and service providers being unintentionally denied. PHOTO: Supplied.

A Quick Note Regarding Medical Emergency Services

In any medical emergency, every minute and second counts - an unexpected delay can literally mean the difference between life and death. PHOTO: Supplied.

In any medical emergency, every minute and second counts - an unexpected delay can literally mean the difference between life and death.

With this in mind, the De Zalze Estate Security Department would like to remind everyone, for an emergency response team to reach you as soon as possible, please contact the Security Department to inform them accordingly by calling the 24-hour security number at **071 443 1779**. It is important to save this number on your phone.

Alternatively, the remote-control room can also be contacted, 021 880 2136.

By notifying the Security Department that emergency services are on their way, the team on site will be able to be prepared for their arrival and ensure that they get to you as quickly as possible.

Electric Fence Upgrade - Perimeter Fence Project

Rusted wiring around certain sections of the perimeter fence has been replaced. PHOTOS: Supplied.

Rusted wiring around certain sections of the perimeter fence has been replaced.

The rusted wires are problematic from two perspectives.

Firstly, it affects the High-Tension voltage of the fence (and resultant effectiveness of deterrence and detection) and secondly, the integrity of the wiring is compromised, resulting in more frequent breakage and sagging along the fence.

To preserve the security and operational functionality of the electric perimeter fence, a comprehensive upgrade was undertaken, replacing almost 3 km of older electric wires from Zone 14 to Zone 30, which had been in place since 2015. As part of this upgrade, perimeter Zone 26 was completely overhauled, with the installation of galvanised steel straining posts and intermediate poles with “big boy” tensioners, galvanised S-hooks, a new barrier fence, and cement anti-dig under the fence.

Contractors' Littering Leads to Damages

It has been brought to the attention of the HOA that some homeowners' vehicle tires were being damaged by negligent contractors working within their village. PHOTO: Supplied.

It has been brought to the attention of the HOA that some homeowners' vehicle tires were being damaged by negligent contractors working within their village.

During the recent HOA Building Controls routine inspections, it was found that almost every village within the Estate had nails, screws, bolts, etc. in the street.

We would appreciate it if homeowners could please inform their contractors that, before leaving the premises, they must ensure that the driveway and street are free from nails, screws and bolts.

Private Open Spaces (POS) for Enjoyment of Residents

*Example of a POS area that is maintained by a member - POS area has unrestricted access to all members .
PHOTOS: Supplied.*

There are several areas on the Estate that have been designated as Private Open Spaces (POS) for the use and enjoyment of all residents on De Zalze for various activities, from fishing at the dam to walking dogs along the river.

In this edition of the Estate newsletter, the HOA would like to remind members of some of the POS rules.

- No work may be undertaken in a POS area without the written consent of the HOA, where members have a POS agreement in place, any additional changes to the POS area require written consent from the HOA.

- A POS agreement does not convey any ownership or exclusive usage rights.
- Unrestricted access for service providers and all members to all designated POS is mandatory.
- Only plants on the HOA approved plant list will be allowed to be planted in POS areas.

*Benches and tables placed in POS area at Riparian Zone for the use of all members.
PHOTO: Supplied.*

Winter Gardening Tips

To thrive in a winter garden, focus on providing adequate sunlight, adjusting watering schedules and protecting your soil.

Mulching is essential to retain moisture and regulate temperature, while pruning can improve plant health.

1.Sunlight and water

- Make sure plants get at least 6 hours of sunlight daily.
- Winter gardens generally require less water than summer gardens.
- Water deeply, but less frequently and water in the morning so excess moisture can evaporate before temperatures drop.

2.Soil and Mulching

- Protect your soil from wind, cold and frost with a layer of mulch.
- Mulch also helps prevent erosion and compaction.
- Consider composting fallen leaves to insulate and cover plants.

Consider composting fallen leaves to insulate and cover plants. PHOTOS: Supplied.

3.Pruning

- Winter is an excellent time for pruning shrubs and trees.
- Pruning helps distribute nutrients evenly and improves plant yield and health.
- Remove dead leaves and cut back branches to improve garden's appearance.

Major thinning of shrubs (e.g., twig dogwood):
1/3 to 1/2 of total branches cut at base

Winter is an excellent time for pruning shrubs and trees. Pruning helps distribute nutrients evenly and improves plant yield and health.

An Update from Our Nursery

Our nursery staff have been busy over this past season ensuring that there are sufficient plants for the winter and spring planting season.

The sowing of our winter seeds has been completed and we have achieved excellent germination rates. The cutting producing tunnel is full of new seedlings for the 2026 planting season.

Currently, the HOA holding nurseries has over a 100 000 plants. Starting in September 2025, the HOA will make several species of perennial plants available for members to purchase.

These funds from plant sales will be used to cover nursey costs and fund upgrades to the nursery.

Rooted in Restoration: Caring for the Natural Heart of our Estate

At the heart of our Estate lies something truly special - our natural environment. To protect, conserve and rehabilitate this asset, the Special Management Area (SMA) Trust was established in accordance with the Provincial Development Approval requirements of the Estate. The primary goal of the SMA Trust is to oversee the conservation, rehabilitation, and long-term protection of the Estate's rich natural heritage, including its indigenous flora and fauna. Guided by our Environmental Management System (EMS), our current focus areas include the rehabilitation of the Blaauwklippen River and its riparian zone, the restoration of wetlands and ecological corridors, and the systematic removal of invasive alien vegetation. The Trust employs a certified and experienced contractor, Maruping, in order to implement the above initiatives. Maruping is supervised by ecological experts from Blue Science who are also contracted to the Trust.

Managing, Repairing and Restoring our Riparian Zone

Over the past two years, the Estate experienced a series of intense flow and windstorms that left significant areas impacted on our section of the Blaauwklippen River and its surrounding riparian zones.

The current Environmental Impact Assessment (EIA) which is required by NEMA (National Environmental Management Act) in order to effect medium- and longer-term repair solutions to the riparian zone, is a lengthy and highly regulated process which requires final approval by the Department of Environmental Affairs and Development Planning (DeadP).

We expect this approval within the next week or two. Whilst we are firmly in our winter rainfall season, the Trust's collaboration with the HOA and the Golf Club in assisting with the appointment of reputable contractors, means that these contractors are now on standby to move onto site to affect the planned repairs wherever possible. The Trust has appointed the required Environmental Compliance Officer to oversee these repairs.

Whilst this has been a very laborious and sometimes difficult project, we have been able to utilise the services of the best available experts (scientists and engineers) to ensure that these repair solutions are optimal for the future.

In the meantime, as a part of essential recovery and risk management, 52 trees were removed by the Trust due to direct storm damage, and an additional 27 removed proactively to safeguard infrastructure in anticipation of future events. As a counter to this loss, some 7 years ago, the Trust launched a thoughtful replanting initiative rooted in ecological restoration.

So far, 2 841 local indigenous trees and shrubs have been planted throughout the river and riparian areas - each one a step toward recreating a riparian zone. The most recent planting took place in June 2025, under the careful guidance of the Trust, and with valuable collaboration with both the Golf Club and the Home Owners Association. The planting of trees on the upper banks of the river is implemented during the onset of the winter season to allow roots to establish in the wet winter season.

The survival of smaller plants (trees) is much higher than cultivated large trees, and the natural selection of surviving trees can be achieved by planting many small trees. The planting of larger trees will be done in selected areas along the river and golf course and these trees will be purposefully maintained to ensure the creation of a desired landscaped outcome.

By planting local endemic species, we not only enhance biodiversity but also foster a more self-sustaining and resilient ecosystem, requiring less ongoing maintenance while enriching the natural character of our Estate and enabling our diverse wildlife to interact, move and thrive.

Figure 1: June 2025 River and Riparian Zone Planting.

Figure 2: SMA Trustees Thys du Toit (Golf Club) and Johan Bestier (Kleine Zalze Farms) supporting Maruping and Blue Science with the Trust's June 2025 planting schedule.

Diversifying our Wetlands

Another important focus of our current restoration work is focussed on the Estate's wetlands, where diversity is a key to long-term health. Over time, many of these areas have become dominated by *Typha capensis* (bulrush or papkuil). While indigenous, if not responsibly controlled, this plant species tends to outcompete others, limiting diversity, choking and reducing the ecological richness of the wetlands.

To address this, the Trust has begun the careful and selective removal of *Typha* in targeted areas. This allows space for a wider variety of indigenous wetland species to be re-established and to take root, restoring the effective and necessary functions of these wetland habitats. The result is a more diverse, ecologically stable, and visually pleasing wetland environment that will also require less intervention and maintenance over time. Through each of these carefully planned and executed efforts, we remain committed to preserving and enriching the natural beauty of our Estate. Thank you to all of our residents and to our Estate entities for supporting the ongoing work of the SMA Trust.
